

This tab is for the backing's volcanic mechanism. Fold the paper over starting from the top (furthest away from the "glue here") over and over until it is one section wide. You should see the "glue here" on one side, which you will later glue or tape to the "accordion" piece. Fold the whole piece in half at the solid line, and then at the second solid line to make an "L" shape. Glue the "glue to (a)" to the accordion piece from page 2.

Cut the lava burst out, fold in half, and glue together. Attach to the front of the accordion piece in the "glue lava" section. Make sure to only glue or tape near that designated area, otherwise, the lava will not be able to move up and down when you press down on the tab.

You should at this point have a zig-zag piece with lava glued to the top front and a tab glued to the top back.

Cut on all of the light blue lines (2 at the bottom of the volcano, 2 sets on each side of the dotted line, and the small little box above the Disaster Dioramas! logo). Cut also on the orange line on the very top of the volcano. Fold the top of the box on the two dotted lines. Fold in the small tab on the top, and glue the side pieces from the front (volcano) side of the box onto the back sides of the box. From there, put the box through the whole in the base, and tape/glue the outward folded tabs to the underside of the base. Once that is completed, thread the accordion piece into the box, making sure the lava burst comes through the top of the volcano and the tab goes through the hole in the back of the box.
